

Security Model for Token Distribution with Anti-Dumping Strategy

Goal

- Fairly reward early users and partners
- Prevent abuse and fast selling ("dumping")
- Build trust with investors, partners, and users
- Promote long-term use and commitment to the VOQX ecosystem

Core Principles

- Users should **earn** VOQX tokens – not just receive them
- Tokens are **released in stages**, not all at once
- Active app usage, holding tokens, and specific actions are rewarded more

Token Release (Vesting)

Standard vesting for larger rewards, partners, or pre-sale:

- Month 1: 20% available
 - Month 2: +20%
 - Month 3: +20%
 - Month 4: +20%
 - Month 5: +20% (100% available)
- Optional: linear daily or weekly unlock

In-App Token Status (Locked vs. Unlocked)

Tokens may appear in the app as "Earned: 500 VOQX" but stay locked until conditions are met, such as:

- "Account active for 14 days"
- "Token used for discount/feature"

→ Only then are they transferred on-chain to the wallet.

Holding Bonus (Staking Light)

Users who **hold VOQX** instead of selling:

- Earn +3% every 30 days
- Increase their avatar rank / XP
- Unlock special features (e.g. level-up, NFT drops)

Anti-Dumping & Trading Protection

On launch via DEX (e.g. QuickSwap):

- Daily trade limit (e.g. max. 1,000 VOQX per wallet)
- Minimum holding period for bonus tokens
- Liquidity pool (LP) prepared by team or community

Referral System with Protection

Referrals are powerful but can be abused:

- Only verified users receive VOQX (via email / wallet / onboarding)
- Referral bonuses are unlocked only if:
 - Both users are active
 - No immediate token drain occurs

Transparency via On-Chain Tracking

All transfers, locks, and releases are publicly trackable via **PolygonScan** – creating trust and transparency for all stakeholders.
